Projects

FI2GO | Health & Fitness Web Application
- Creates a workout and nutrition schedule based on your physiology and personal targets.
- In the development process, I learned how to link the front-end to back-end via API calls.
- Tools Used: ReactJS, HTML/CSS, Java, Spring-Boot, MySQL, RESTful APIs

Beak Speak | Hackathon Messaging Application
- Participated in a 24-hour hackathon competition as part of a team where we achieved 1st place
- Lead the design process where I was responsible for presenting our ideas in the visual form e.g. mind maps, entity relationship diagrams, etc.
- Enforced the use of the scrum methodology and was responsible for creating/updating the scrum board
- Solely responsible for producing the front end using React and participated in the backend development.

Food Delivery System | University Group Project
- Requirements Engineering assignment in which I led our team to achieve 83% (top mark).
- My role as team leader was to allocate tasks between the Team and keep all engaged.
- Helped me learn how to make the most of my resources.
- Skills Used: Database Management, Entity-Relationship Diagrams, GIT version control

Portfolio Site | ReactJS Responsive Website
- Responsive CV/Portfolio site built using React.JS and Graphically designed using photoshop.
- Showcases my work experience and talents.
- Link: [Click Here To View](#)
